### 3. Tutorial

Založení projektu:

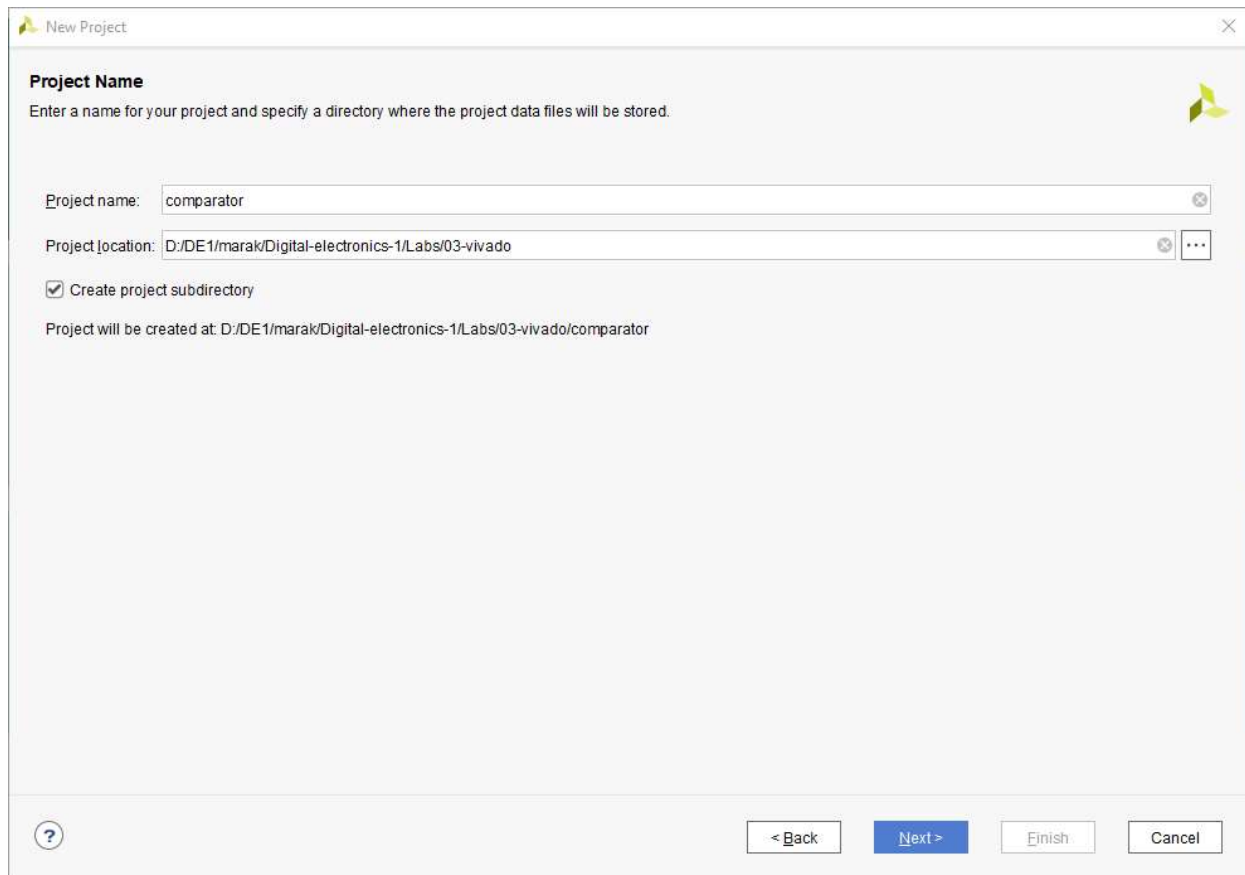

Pomocí wizaru projdeme založení projektu

ve wizardu se pohybuje šípkami next

Pojmenování projektu a jeho umístění:

**New Project**

**Project Name**  
Enter a name for your project and specify a directory where the project data files will be stored.

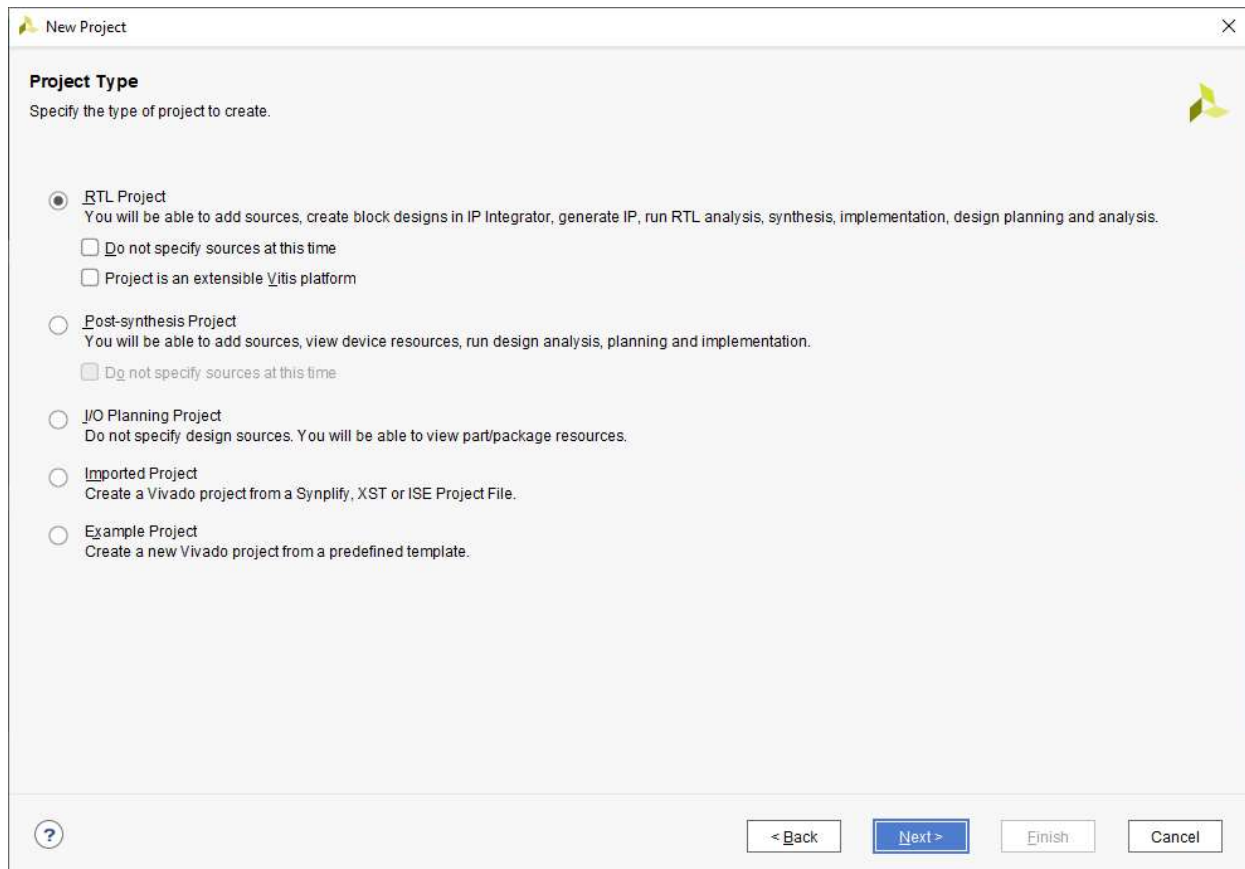

Project name:

Project location:

☒ Create project subdirectory

Project will be created at: D:/DE1/marak/Digital-electronics-1/Labs/03-vivado/comparator

Vybereme RTL project

**New Project**

**Project Type**  
Specify the type of project to create.

☒ **RTL Project**  
You will be able to add sources, create block designs in IP Integrator, generate IP, run RTL analysis, synthesis, implementation, design planning and analysis.  
☐ Do not specify sources at this time  
☐ Project is an extensible Vitis platform

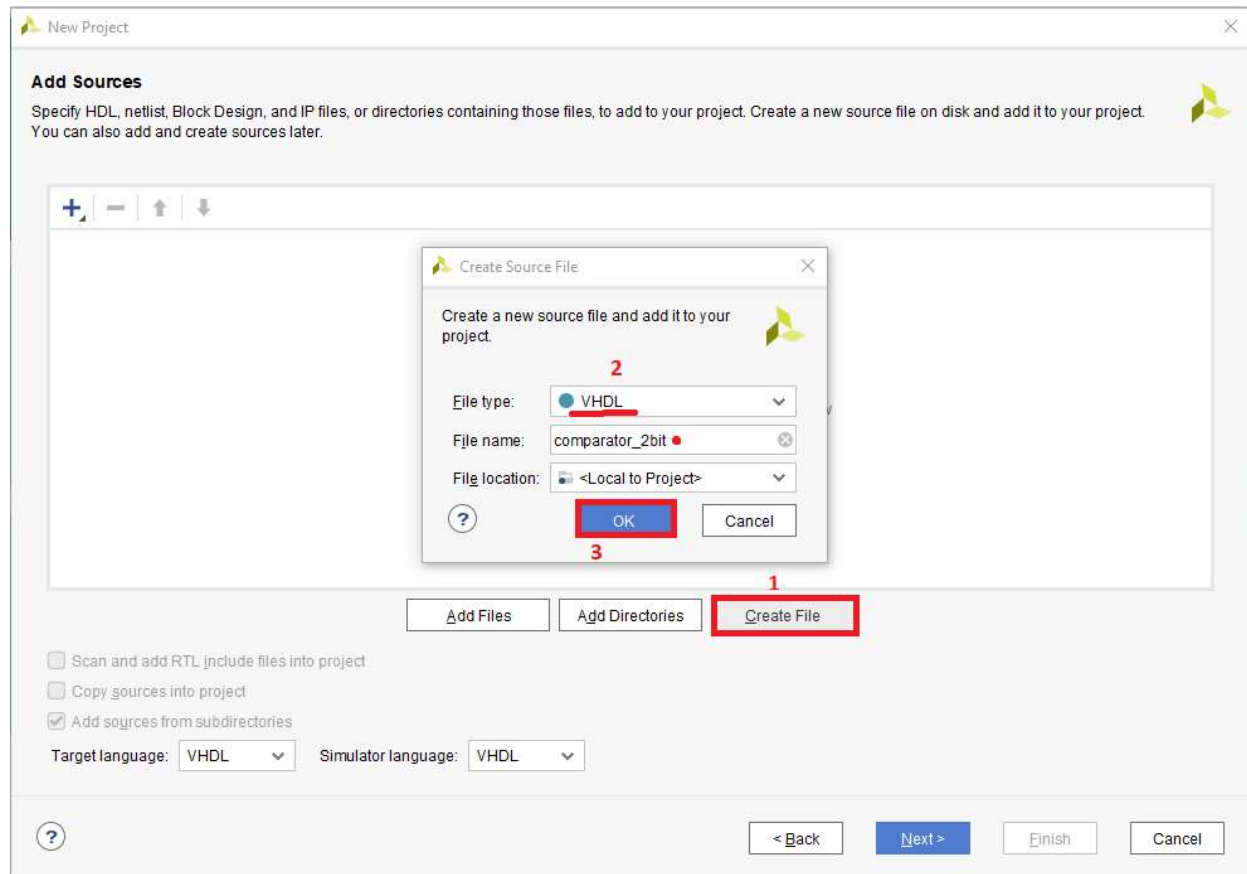

☐ **Post-synthesis Project**  
You will be able to add sources, view device resources, run design analysis, planning and implementation.  
☐ Do not specify sources at this time

☐ **I/O Planning Project**  
Do not specify design sources. You will be able to view part/package resources.

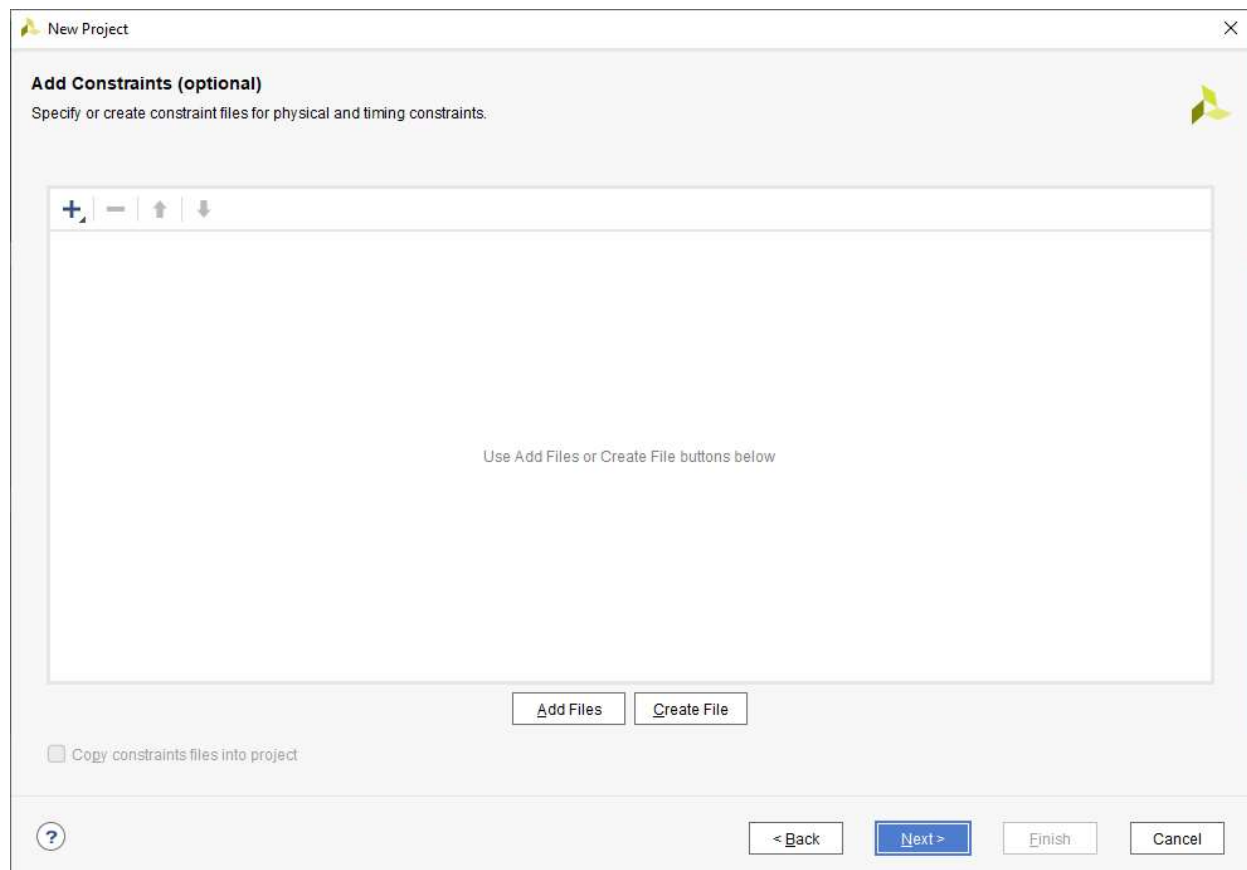

☐ **Imported Project**  
Create a Vivado project from a Synplify, XST or ISE Project File.

☐ **Example Project**  
Create a new Vivado project from a predefined template.

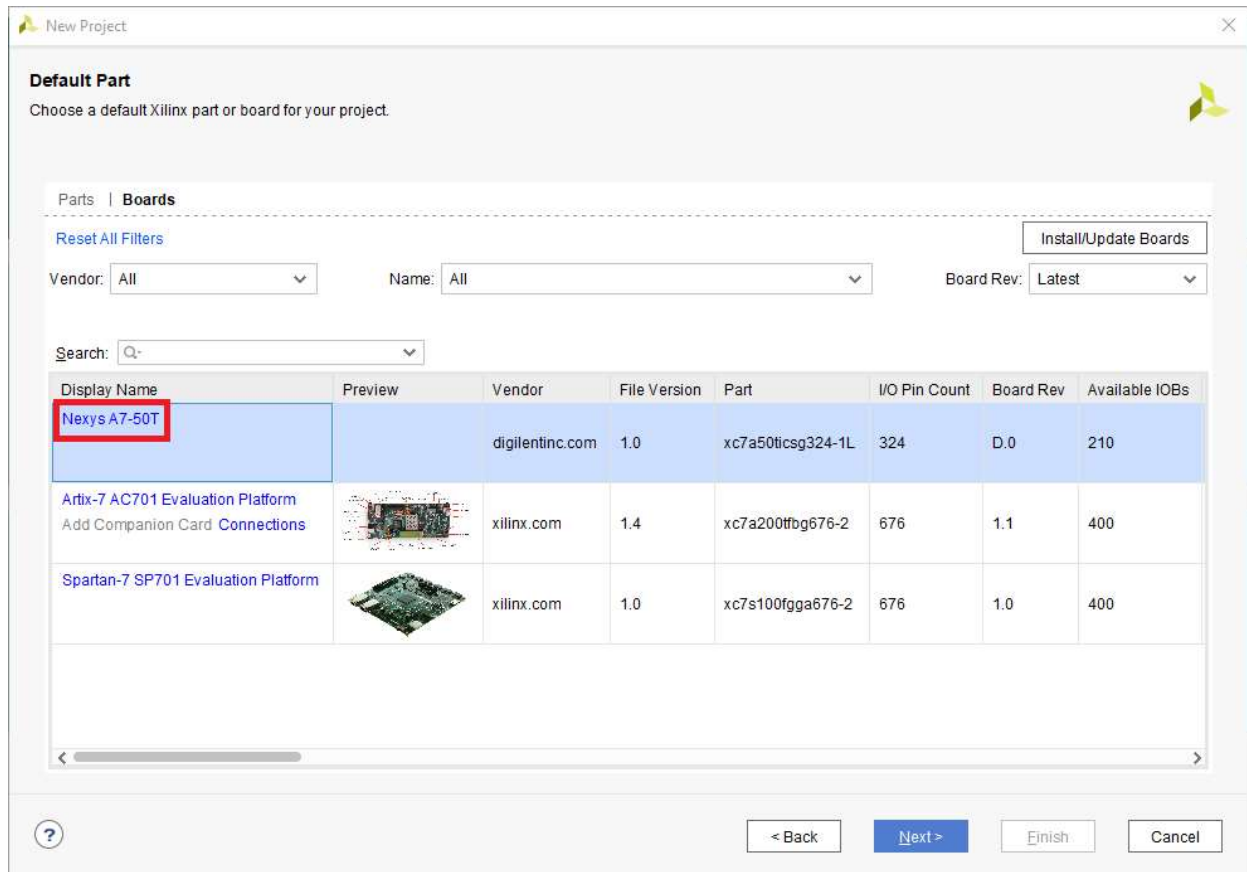

Následně přidáme zdrojové soubory vybráním create file a vybereme typ souboru VHDL

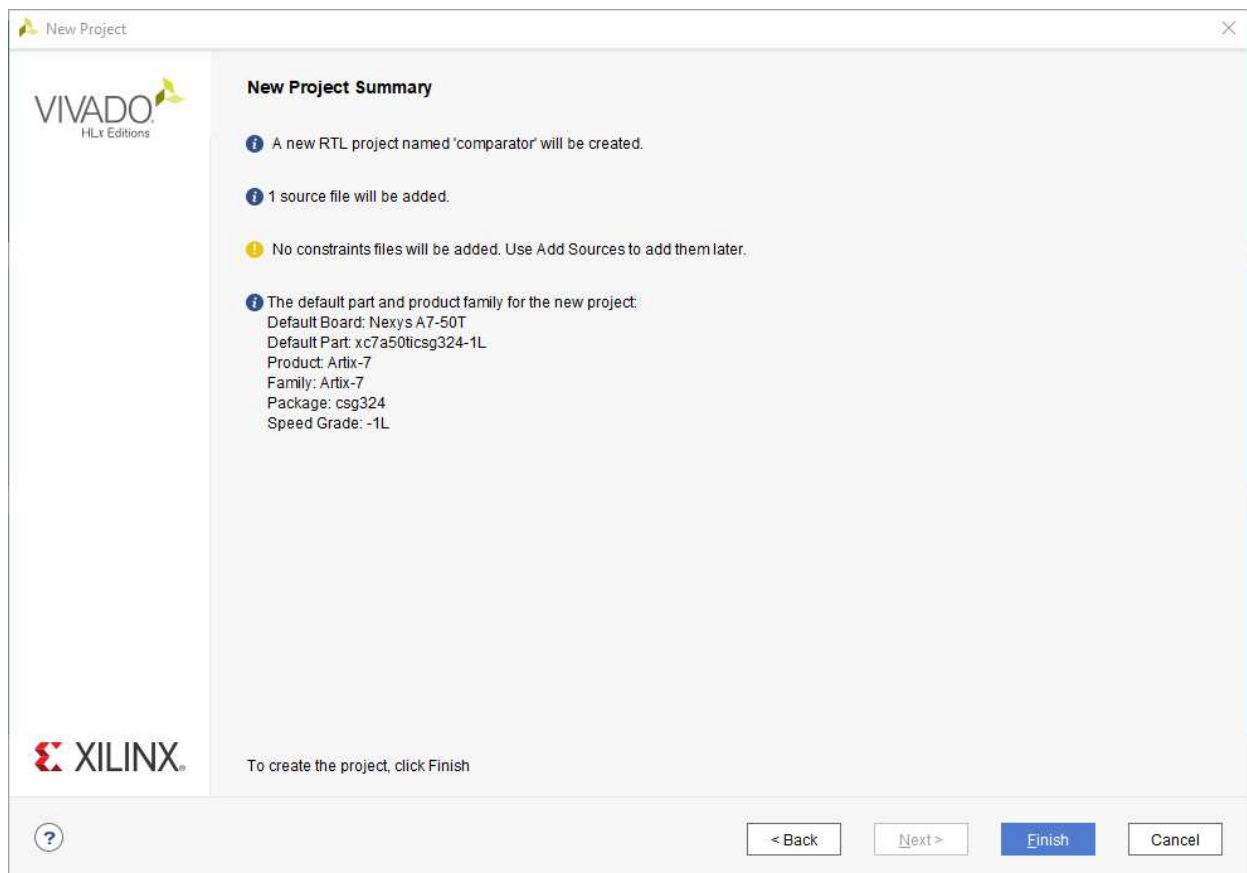

Můžeme přidat constraints files

Vybereme desku Nexys A7-50T

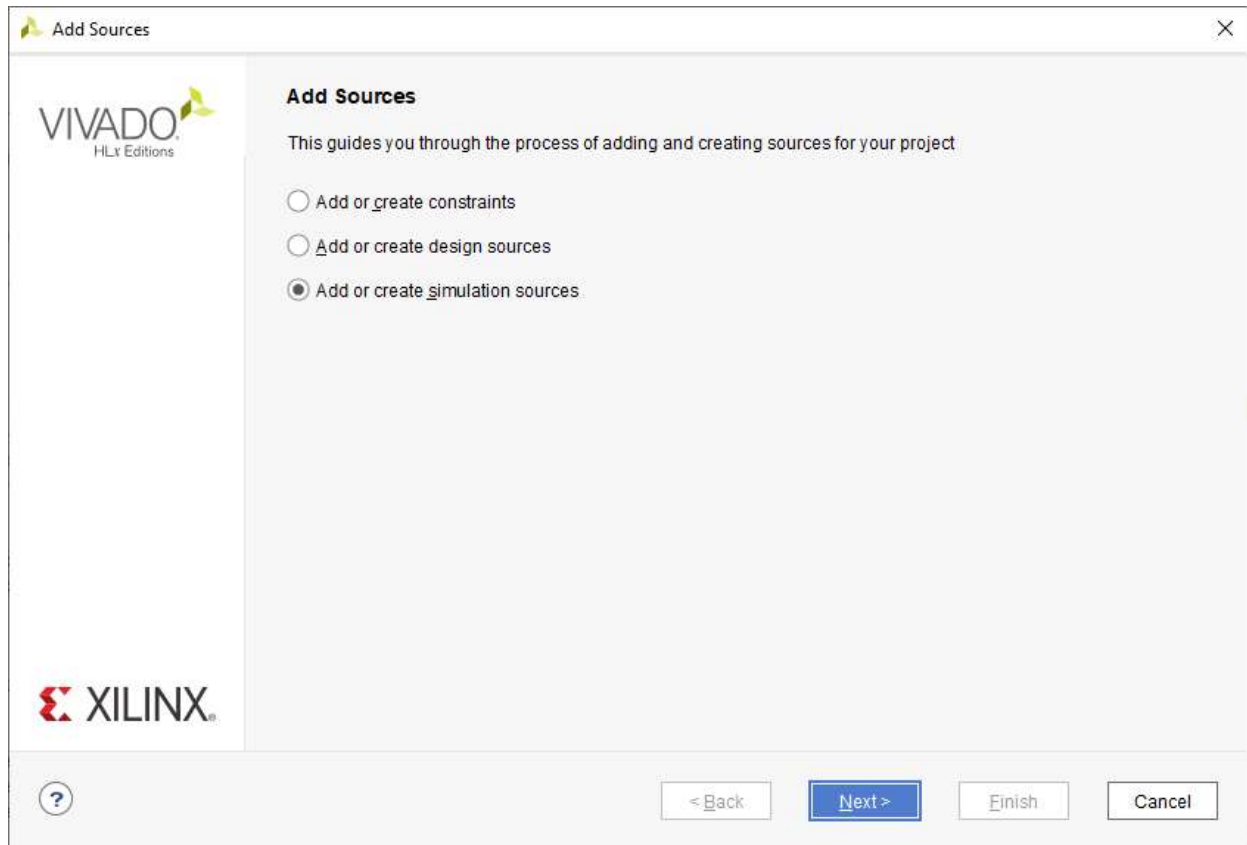

A nakonec tlačítkem Finish projekt vytvoříme

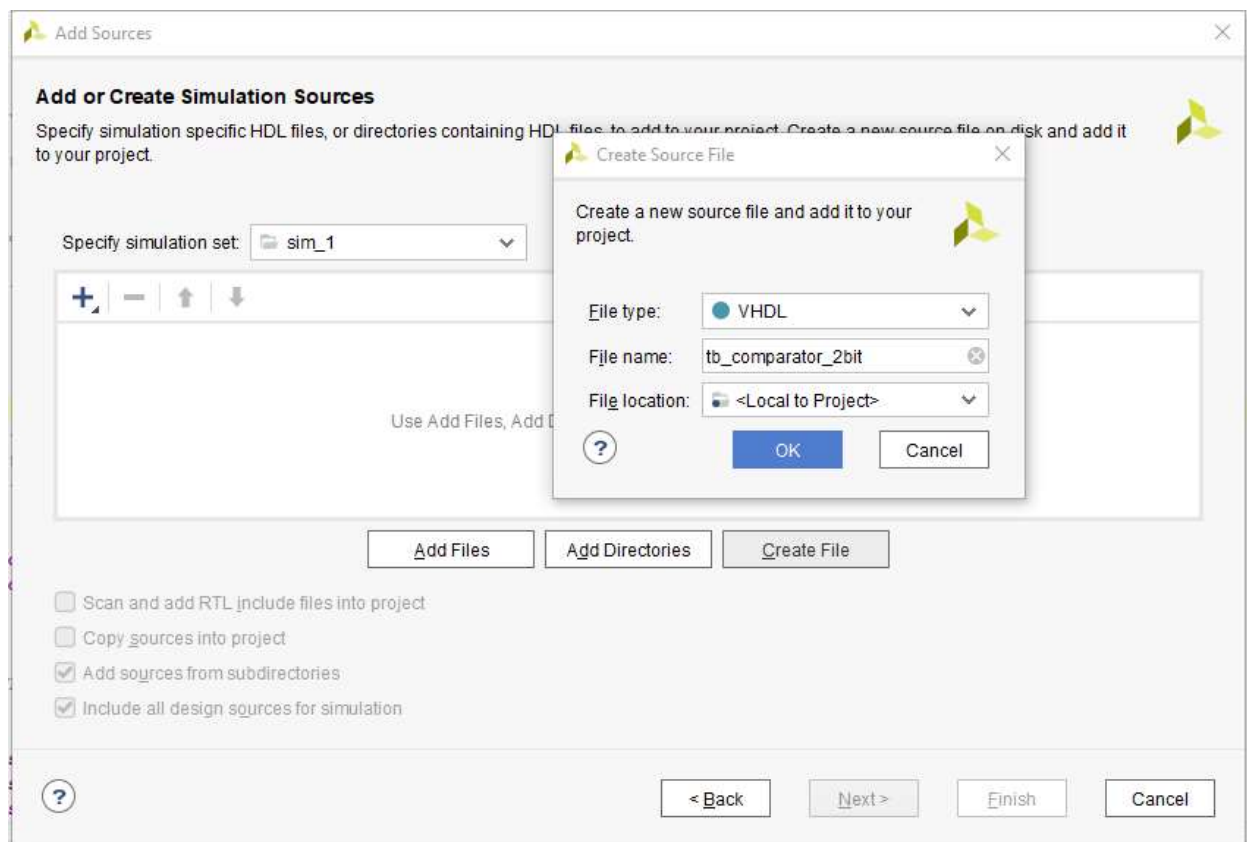

### Přidání souboru

Pokud chceme přidat soubor, např testbench, tak pomocí File>Add source (nebo Alt+A) vyvoláme okno kde vyberem nejprve typ souboru:

Opět vybereme typ souboru a zadáme název

Simulace se spustí ze záložky Flow>Run Simulation>Run Behavioral Simulation nebo z bočního navigátoru v sekci Simulation
